

The Political Economy of Telecommunications Reform in Developing Countries: Privatization and Liberalization in Comparative Perspective

Based on a policy-making theoretical framework and on the recent experiences of 10 developing countries, this study explores the factors that lead to the success or failure of telecommunications reform. It provides universal conclusions that might help predict the success or failure of telecommunications policies, such as, privatization and liberalization, in other nations that are moving towards reform. This book is an original contribution to our understanding of the rapid and often complex transformations in telecommunications policies. It defies previous assumptions about conditions for success and failure of policy implementation. Although numerous publications deal with telecommunications policy reform in Europe or the United States, little has been written about it in the developing world. This book fills the gap and will be invaluable for academics, policy makers, and others concerned with communications, economic development, and international business.
